As outlined in the recently adopted “Plano Nacional de Saúde 2021-2030”, the Portuguese government has worked on reforming the health system in Portugal by establishing new objectives to increase welfare in the country. Among these, a particular emphasis is placed on reducing the rate of premature mortality by notably targeting respiratory diseases and lung cancers.

The IRC welcomes the work on this initiative and is also committed to collaborating with all relevant stakeholders in promoting lung health across Portugal by developing national strategies.

### Societal economic cost by disease:

- **Asthma**: €921.7 million
- **COPD**: €2.3 billion
- **Interstitial Lung Disease**: €204.1 million
- **Lower Respiratory Tract Infections**: €2 billion
- **Mesothelioma**: €28.6 million
- **Lung Cancer**: €2.1 billion
- **Tuberculosis**: €103.9 million
- **Societal economic cost of respiratory diseases**: €7.6 billion

### Better...

1. Prevention of respiratory diseases
2. Access to the right treatment at the right time
3. Action on reducing inequalities
4. Prioritisation of research, data and insight to improve care
